3. MANTHAN (मंथन) Event by Department of Music.

Date.1.4.2024

Language and communication skills play a vital role in the field of music, which proves to be highly beneficial for students. As a result, a " मंथन " activity is conducted in the music department, where students present themselves. This process enhances their verbal communication skills, making it easier to express ideas during rehearsals or performances. It also helps music teachers effectively convey musical concepts to the students.

Non-verbal communication skills, such as body language and stage presence, make live performances more effective, allowing students to connect emotionally with the audience. Additionally, cultural understanding aids student's in collaborating and respecting diverse musical traditions. Writing skills are equally important, as they are useful for lyric writing, documenting musical ideas, or sharing reviews. On the other hand, listening skills foster harmony in group performances and help students accept feedback for improvement.

By integrating all these skills, students can elevate their creativity, communicate effectively, and build meaningful connections within the musical community. This holistic development equips them with the necessary skills to succeed in the music field.
